

Stanley Black & Decker Group

FACOM, AN UNDISPUTED LEADER

'Excellence', 'Innovation' and 'Quality' are the three values associated to FACOM's black and red colours. From the onset, the company was positioned on top of the range, without ever denying it. Today, nobody disputes the specifics of FACOM products, and their aficionados consider them as the 'must-have of hand tooling'.

EUROPEAN NUMBER 1

Throughout the decades, FACOM has climbed up to the leading rank in global manufacturers. European number 1 in manual tooling over the last 35 years, the Group maintains its leadership through a unique innovation policy. Over two hundred engineers and experts, whether at the head office in Morangis or in the different sites in Europe and in the world, are dedicated to research.

'For those who build the world'

Thanks to its level of excellence, its innovative products, the quality of its tools, FACOM is the undisputed reference in terms of tooling in sectors as different as automotive repair, aeronautics, electricity, electronics or industrial maintenance.

THE 'LIFETIME WARRANTY', SPECIFIC TO FACOM TOOLS

André Mosès, a visionary entrepreneur, launched the lifetime warranty in 1952. A genuine revolution in the world of industry. This fabulous marketing pitch was supported by the total trust in the reliability and durability of FACOM tools. With this warranty, FACOM follows the level of quality of its products permanently, identifies improvement paths and ensures premium service to its clients. The principle of this warranty is that it is 'total', whatever the tool's condition, provided it was used in 'normal' conditions. This commitment lives on, excluding only technical products, torque tools, roller cabinets and furniture. Every day, a dedicated department with a staff of 18, returns the equivalent of 1.2 ton new products to the clients.
