

Crosby Straightpoint (SP)

Load Monitoring Products

Crosby Straightpoint (SP) is an award-winning, UK & USA load cell manufacturer specialising in the production and calibration of load monitoring equipment for the following applications:

- Force measurement
- Load monitoring
- Suspended load weighing
- Compression force sensing
- Wire Rope Tension Metering

In these Industries: construction; container weighing; extreme sports; heavy lift; line tensioning; logistics; marine; oil and gas; stage and event rigging; shipping; testing; towage and salvage; utilities; defence; and more.

The products that Crosby SP produces are developed using the latest cutting-edge technology and materials. By pushing the boundaries, we can continue the endeavour to further decrease risk and increase safety in heavy-load lift situations.

Range of products from 100kg beam load cells to 1,500t load shackles and beyond . Cutting-edge technology including unsurpassed wireless products, Huge range of accessories and data logging software packages available with most load cells

Crosby SP continues to lead in innovation by launching the first worldwide off-the-shelf wireless centre of gravity system and is the first load cell manufacturer to incorporate RFID tags in all its 'link' load cells as standard.

SP is the only manufacturer in the world with load monitoring / measuring products that are certificated to be used within hazardous gas environments found mainly within the gas, oil, and manufacturing industries.
